

CARING FOR YOUR GARDEN MUMS

- WATERING
 - Garden mums like it best when their soil is kept evenly moist.
 - Water your garden mum every day when temperatures are warm.
 - Water every 2-3 days when temperatures are cool.

- Garden mums are hardy and will survive a heavy frost. The frost may kill the blooms, but the mum will survive. To ensure the most enjoyment from your mum, bring it inside or cover it with a sheet or blanket to protect it from the frost.

- Garden mums enjoy full sun and need at least a half day of full sun to bloom. When your mum reaches full bloom, you can place your mum in shadier spots.

- Garden mums typically bloom for 4-6 weeks depending on variety.

- For more information about garden mums and our other fundraisers visit our website at www.plantsforprofits.com or give us a call at 800.334.5770.
